## Standard integrated Fridge/Freezer

- **Detect water leakage in time.**
- **Prevents water damage under refrigerators and freezers.**

**Prevents  
water damage.**  
Collects and diverts  
condensation.

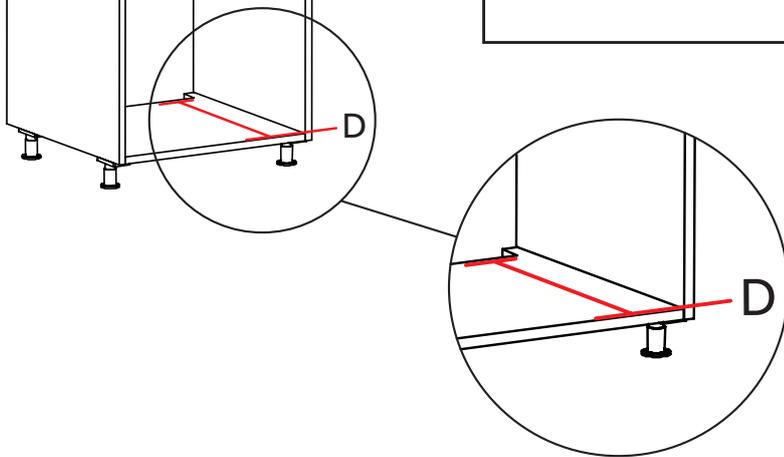

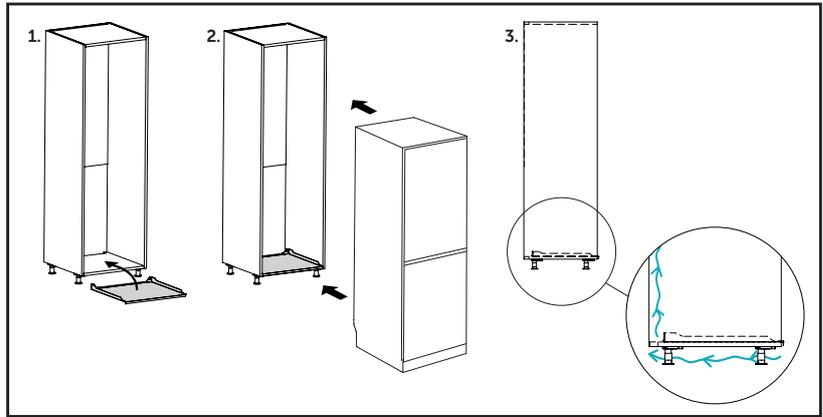

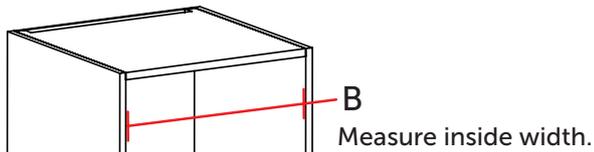

The integrated driptray/leakage protection of the standard series is placed on the base of the cabinet in tallcabinets. The fridge/freezer is then lifted onto the driptray in the cabinet. They are designed to collect condensation and leakage water that drains into hidden spaces under the fridge/freezer and is led out in front of the fridge/freezer. In this way, you prevent and avoid unnecessary water damage to the cabinet and the property's construction.

Our integrated driptrays have improved features such as the downfolded front which holds the driptray in the correct position and protects the front of the shelf, and which, when installed, prevents the tray from sliding backwards and blocking the air flow in back of the cabinet. We have also lowered the rear fold to optimize the air flow.

The trays are transparent and made of impact-resistant polypropylene plastic and are available in several standard sizes. The assembly instructions are easy to follow and are of course approved by Säker Vatten. The product is also accepted in Byggarubedömningen and assessed by Sundahus. Type approved 0505/01 and meets the requirements according to the provisions of the Swedish Housing Agency's building regulations: BBR: Concealed surfaces in rooms or building parts 6:5334. Sold in well-sorted hardware stores, appliance chains and plumbing wholesalers. Made in Sweden.
