

Tollco Water Leakage Switch

Wired Sensor

- **Minimises water damage from coffee and water machines.**
- **Automatic water shut-off in case of leakage.**

Creates security around the clock!

THREE MAIN FEATURES:

- Emits alarm in case of leakage.
- Shuts off the water in case of leakage.
- Simple installation.

IT WORKS VERY SMOOTHLY

1. Plug the PlugIn to the electrical outlet.
2. Install the valve(s).
3. Place sensor tape.

The system is then up and running and you can feel safe.

SECURE BENEFITS

Tollco Water Leakage Switch Wired Sensor reduces the risk of water damage. The sensor is placed under whatever is to be monitored and constantly detects whether water is getting on it. If it gets water on it, the water is immediately shut off and an alarm signal informs you that a water leak has occurred.

In sink cabinets, we often have a high number of connections to, e.g. mixers, dishwashers and other water-connected equipment. At the same time, we have drain pipes from the sink and dishwasher with a number of joints. This is one of the reasons why more than 30 % of all water damage occurs in the kitchen.

RECOMMENDED BY INSURANCE COMPANIES

Water damage entails high costs for insurance companies. Therefore, many support the installation of our water switches/water circuit breakers. Check with your insurance company about what requirements they have and how you can get a lower premium.
